[Hiring Manager Name]

[Title]

[Company Name]

[Company Address or Remote]

Dear [Hiring Manager Name / Hiring Team]:

Writing to apply for the [Senior Full Stack / React Native Developer] role at [Company]. Six-plus years of shipping production web and mobile products — React Native since 2019 — with repeated ownership as Team Lead on selected engagements: architecture, mentoring, and production handoff.

At Groove Technology, architected and delivered Moorrr, an Australian fintech lifestyle app now at 10K+ monthly active users, including custom charts and CircleCI / Fastlane release automation. Led React Native architecture for Xsights livestock management, including dynamic map layouts, and transferred a production-ready codebase to the internal team. On uWorkin, a marketplace with 100K+ listed jobs, improved authentication with Facebook Login and Google reCAPTCHA v3 while maintaining the app at scale. Beyond mobile, led frontend teams on Market Plus and GHomeHR (Next.js, React, Keystone.js, Cube.js), tightening CI/CD and cutting release or deployment effort by roughly 25–30%.

[Company]'s focus on [product / platform / mobile or full-stack problem] aligns with experience delivering reliable React Native and full-stack JavaScript systems under clear ownership. Eager to bring the same architectural discipline, mentoring habits, and production focus to your team.

Thank you for your consideration. Glad to discuss how this background maps to [Role] at [Company].

Sincerely,

Chin Trinh
